

## Scenario

Transitioning ongoing development and enhancement of business systems from waterfall to agile development

## Scenario

Demonstrating the business impact of adopting agile technical practices such as test driven development, pair programming, continuous integration, and/or continuous deployments

## Scenario

Enhancing applications (web and/or mobile) to bring in new customers and/or customer groups to increase business value  
– assess if development to increase capabilities results in more customers that increase business value

## Scenario

Transitioning / modernizing applications from a legacy platform to a modern cloud platform

## Scenario

Building new features in existing applications (web & mobile) that are targeted to increase business value from existing customers – seek to increase business value to existing customers / users of applications in the portfolio

## Scenario

Measuring the business impacts of augmenting existing web capabilities with mobile and/or omnichannel capabilities

## Scenario

Maintaining appropriate capacity allocation to balance priority between sustaining a legacy platform while building & testing a new platform

## Scenario

Demonstrating the impact of changes & improvements made in response to customer feedback to restore trust in the ability to deliver desired software & capabilities to end users

## Scenario

Evaluating if process changes to multiple teams and/or adopting a framework to scale agile accelerates the delivery of business value

## Scenario

Demonstrating the impact of technical improvements and/or process changes to reduce technical debt and/or reduce the incidence of critical application outages (SEV1s)

## Scenario

Assessing the business impact of transitioning from internal support & on-premise operations to a managed services and/or cloud operational model

## Scenario

Improving the delivery of software / business capabilities to end-users by aligning to common technical standards, architectures, and platforms

## Scenario

Assess the impact of activities to improve customer experience inclusive of usability enhancements (making features easier to use) and technical improvements (faster performance, fewer crashes, etc)

## Scenario

Determine the impact of strategies and practices to improve team member morale, engagement and/or innovation to enable the delivery of more business value

## Scenario

Assess if acquired tools are providing intended return on investment (ROI) and/or determine if strategies to promote greater utilization / efficiencies from specific tools are providing desired benefits

## Scenario

Demonstrate the impact of organizational learning to accelerate the delivery of capabilities, increase business value, increase employee engagement and/or increase employee innovation
